

ONE MORE LOOK AT THE JUBILEE COMPUTATIONS:

Oct. B.C. 1 to Oct. A.D. 1 = the year called A.D. 1.

Therefore: Oct. B.C. 1 to Oct. 1874 = 1874 full years.

The ANTITYPICAL waiting cycle = 2500 years.

1874 years of A.D. subtracted leaves

626 full years remaining to cycle.

Oct. B.C. 1 back to Oct. B.C. 2 = 1 year.

Therefore: 950 years earlier than its END (i.e., than Oct. 626) should be the beginning of the counting of the typical arrangement in the year the Jews entered Canaan (Cf. Deut. 2:24 - 25; Josh. 4:19). This beginning of the 950 years, then, would be Oct. 1576, or the beginning of the year we call 1575 B.C. Israel crossed Jordan in the Spring, but the crossing of Arnon (apparently the fall before) was the time they were to begin their count.

Leviticus 26 requires an interesting differentiation between the agricultural year and the calendar year. See verses 20-22.
